

The Discovering Oman Team

Winter 2017/18

ANNA HARRISON

Duchess High School,
Alnwick, Northumberland

Anna has been teaching for over 20 years in England, Scotland, New Zealand and South Korea, and is constantly inspired by young peoples' thirst for understanding, and has a love of that 'light bulb' moment when their thinking is challenged. Anna feels that Geography instils a love of nature, tolerance and an understanding of the connections between environments and people, and is proud to be part of that process.

She currently teaches at Duchess High School, Alnwick and lives in Northumberland, where she gets to enjoy the constantly changing landscape at the coast. Whenever she can, Anna takes the chance to explore, and has recently returned from a trip to Georgia and the breathtaking Caucasus mountains.

Membership of the Royal Geographical Society and their monthly magazines have kept Anna and her teaching resources up-to-date, and led her to this fantastic opportunity in Oman, where she can't wait to get started.

DEIRDRE KEHOE

Dunfermline High
School, Fife, Scotland

Deirdre is currently a teacher of Geography and Environmental Science in Dunfermline High School, Fife, and carried out her undergraduate degree at St Patrick's College of Education in Dublin and majored in Human Geography. She went on to train at Moray House School of Education, Edinburgh, and has been teaching for three years.

When asked what inspires her about the subject, she responded *'I feel that Geography is an inspiring subject as it encompasses so many different areas: not just 'looking at maps' as many people believe it to be. I developed my love for Geography at school, when comparing different countries across the world. This introduced me to the study of ethnography, which I believe to be one of the most important aspects of the subject. Geography gives students the opportunity to explore parts of the world that they would never have been familiar with before. I have found this to help develop positive social attitudes towards migration amongst the youth.*

This project is very exciting and I hope to be able to learn more about Oman, which can then be brought back to the students in my school. It is also an invaluable opportunity to build up global links and gain transferrable fieldwork skills.'

JONATHAN MARSH

The British School Muscat,
Oman

Jonathan is a living geographer; enthusiastic, motivated and an inspirational person who is full of energy and has a real passion for his teaching. Throughout his geographical life, he has lived on, and carried out research on glaciers in Greenland with BES Expeditions, housed at The Royal Geographical Society, has researched development studies whilst volunteering in Africa, and has also trekked and lived in Asia. He has been teaching geography at the British School Muscat for 1 year, and like everyone who comes, has fallen in love with the country. *'The geography of Oman is exceptional and I cannot wait to explore it further. I feel that the experience of different cultures and environments is very important in teaching geography and having taught now for about 12 years in different places around the globe, I believe that I can offer pupils a varied, unique perspective that in combination with the latest IT wizardry, will bring their study of geography to life.'*

KATIE MARTIN

Geography Subject Leader
Blackfield Primary School,
Hampshire

Katie Martin has been an enthusiastic primary teacher for seven years teaching in inner London and Hampshire. She also has a master's degree in Economic and Consumer Psychology from the University of Exeter. Currently, she is the Geography Subject Leader and a year 5 class teacher at Blackfield Primary School (Hampshire). Katie is passionate about teaching map skills and field work to children in a creative way. As a child, she grew up sailing on the River Medway and a range of reservoirs and this has inspired her interest into water management and how waterways are used. She is especially interested in desalination and how Oman uses this approach effectively. Katie is looking forward to going out to Oman to learn more and she will use this opportunity to share her experience with her school. In her spare time Katie competes as a rower and has won Henley Women's Regatta.

RACHEL HAY

George Heriot's School,
Edinburgh

Rachel Hay is an enthusiastic Geography teacher with 8 years' experience teaching Geography, Geology and Managing Environmental Resources. Between 2013 and 2015, she taught English in Trento (Italy), and worked for Digital Explorer on their 'Skype in the classroom' project, linking explorers and scientists with schools around the world. Following this, she took on the role of Education Officer for the Royal Scottish Geographical Society and, amongst other projects, organised the 'Scotland Rocks' conference in 2015, and the successful pilot of the 'Geography Ambassadors' scheme in Scotland. Rachel contributed material towards Alan Parkinson's teaching resource about earthquakes for the British Red Cross, based on her experiences during and after the earthquake in Nepal in 2015. Rachel now teaches Geography in George Heriot's School in Edinburgh. She loves the varied and dynamic nature of Geography and embraces every opportunity to bring the subject to life for her students through fieldwork.

RUTH HINE

The British School,
Muscat, Oman

Ruth Hine has worked in education for 24 years, and is currently a geography teacher at the British School Muscat. Previously she worked in a British comprehensive state school, as a year leader, and then the independent sector, as a head of department. In Muscat, when she's not competing in biathlons, Ruth teaches 11-18 year olds, and co-runs the Young Geographers club. Students enter the RGS YGOTY competition annually, with entries from Key Stage Five students for the first time in 2017. The Young Geographers initiative grew from working with primary school children, as well as senior school students, and collaborating with primary colleague, Tamsin Turner, enhanced by personal membership of the Geographical Association and Fellowship of the Royal Geographical Society. Working at an international British school has given Ruth the opportunity to travel extensively; Nepal was one of the most memorable journeys, which became more poignant after the 2015 earthquake, an event that saw her go on to raise a substantial amount of money for disaster relief and reconstruction projects.

TAMSIN MURCHIE

The British School,
Muscat, Oman

Following a degree in geography at the University of Sussex and a PGCE, Tamsin has led and worked to promote the teaching and learning of geography in primary schools in the UK and the Middle East for 27 years. For the past 15 years she has taught at the British School Muscat, where she is subject leader for Primary School humanities. Tamsin has an interest in the Geography of Happiness and the role a sense of place has on learning. The work she has completed on this has been published in the GA journal, Primary Geographer. Tamsin is also passionate about learning outside of the classroom and developing the use of big questions to promote enquiry based learning. In 2014, Tamsin established BSM Young Geographers, an initiative that has grown from 24 students to nearly 150 in Years 5 to 13. All members prepare an entry for the RGS Young Geographer of the Year Award – since the group started, a BSM Young Geographer in KS2 has received a highly-commended award in this prestigious competition. Tamsin is a member of the Geographical Association and a Fellow of the Royal Geographical Society.
